KundenrezensionenHilfreichste Kundenrezensionen0 von 0 Kunden fanden die folgende Rezension hilfreich. Well written, but some errors/old codeVon VortilionFor example the task "server" won't work anymore with newer version of gulp. Instead I found out that you have to use "gulp-webserver", which configuration is a bit different:...webserver = require('gulp-webserver'),...// Development web servergulp.task('webserver', function() { gulp.src('./app') .pipe(webserver({ host: '0.0.0.0', port: 8080, livereload: true, directoryListing: false }));});I haven't figured out yet how to use history-api-fallback with gulp-webserver, unfortunately you can't just copy the code from the book here, that

won't work.
