**Von Paul C. Brown : Architecting Composite Applications and Services with TIBCO (TIBCO Press)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Architecting Composite Applications and Services with TIBCO (TIBCO Press):

KundenrezensionenHilfreichste Kundenrezensionen0 von 1 Kunden fanden die folgende Rezension hilfreich. Top FachbuchVon Tobias HofmannDieses Buch ist eine Muss Lektre fr alle IT Architekten, die sich mit Integration, SOA und Umsetzung von Geschftsprozessen beschftigen.

Kurzbeschreibung Paul Brown has done a favor for the TIBCO community and anyone wanting to get into this product set. Architecting TIBCO solutions without knowing the TIBCO architecture fundamentals and having insight to the topics discussed in this book is risky to any organization. I fully recommend this book to anyone involved in designing solutions using the TIBCO ActiveMatrix products. Nikky Sooriakumar, TIBCO Architect, PruHealth An effective primer for building composite services using TIBCO, this book provides a holistic approach to strategy integrated with implementation details. I find it tremendously useful in moving recursively from business solutions to design patterns to architecture. Tangible examples are provided that build to composite services. And advanced topics are explored that add another valuable implementation dimension. I recommend this book to software architects who need to quickly build an effective business- services-oriented environment. Abby H. Brown, Ph.D., Enterprise Architect, Intel Corp. The architecture series from TIBCO Press comprises a coordinated set of titles for software architects and developers, showing how to combine TIBCO components to design and build real-world solutions. TIBCO's product suite comprises components with functionality ranging from messaging through services, service orchestration, business process management, master data management, and complex event processing. In composite applications and services, multiple components collaborate to provide the required functionality. There are many possible architectures for these distributed solutions: Some will serve the enterprise well, while others will lead to dead-end projects. Architecting Composite Applications and Services with TIBCO shows how to create successful architectures with TIBCO products for both overall solutions and individual services. This guide builds on the basic design patterns and product information presented in the first title in the series, TIBCO Architecture Fundamentals (Addison-Wesley, 2011). After reading this title, you will be able to Create architectures for solutions, service specifications, and service implementations
