Von Anup Shah : Ext.Net Web Application Development before purchasing it in order to gage whether or not it would be worth my time, and all praised Ext.Net Web Application Development:

KurzbeschreibungIn DetailTo build a rich internet application, you need to integrate a powerful client side JavaScript framework with a server side framework. Ext.NET achieves this by integrating Senchas Ext JS framework with the power of ASP.NET. The result a sophisticated framework offering a vast array of controls, layout, and powerful AJAX and server bindings, which can be used to build rich, highly usable web applications."Ext.NET Web Application Development" shows you how to build rich applications using Ext.NET. Examples guide you through Ext.NETs various components using both ASP.NET Web Forms and MVC examples. You will also see how Ext.NET

handles data binding and server integration. You will also learn how to create reusable components and put them together in great looking applications. This book guides you through the various Ext.NET components and capabilities to enable you to create highly usable Ext.NET components and web applications. You will learn about various UI components and numerous layout options through examples. You will see how the AJAX architecture enables you to create powerful data-oriented applications easily. This book will also teach you how to create reusable custom components to suit your needs. "Ext.NET Web Application Development" shows you how to create rich and usable applications using Ext.NET through numerous examples. Approach This is a step-by-step tutorial packed with examples and tips to learn Ext.NET from scratch. Who this book is for This book is written for .NET Web Application Developers who are familiar with ASP.NET looking to build .NET based Rich Internet Applications. Whether you are new to Ext JS or you are looking to use your existing Ext JS skills in a .NET environment, this book will be useful for you. After graduating from Manchester University with a First Class Honors degree in Computing and Information Systems, he got a job in the United States. There, he soon headed the web development for a rapidly growing dot com, experiencing both the highs and lows of the first dot com bubble. After a number of years there he moved back to England where he grew up and joined a small dynamic software company working as a consultant, architect, and web developer for some high profile retail e-commerce websites, including some of the world's largest. Around 2007, while at the same company, he changed focus from a consulting role to a product development role, responsible for the user interface of a complex retail web application product. It was at this time he came across Ext.NET (or Coolite as it was known back then) and rapidly adopted it and introduced it into the company's product. Anup can be found on the Ext.NET forums, and contacted via his blog, <http://www.onenaught.com>.
