Von Timothy J. Mullin : Fighting Submachine Gun, Machine Pistol, and Shotgun: A Hands-On Evaluation before purchasing it in order to gage whether or not it would be worth my time, and all praised Fighting Submachine Gun, Machine Pistol, and Shotgun: A Hands-On Evaluation:

KundenrezensionenHilfreichste Kundenrezensionen0 von 0 Kunden fanden die folgende Rezension hilfreich.
Excellent, well-researched work.Von Ein KundeThis is an excellent book. It is well written with plenty of good factual data. Rarely are we given the opportunity to hear a reasoned and well-researched discourse on the merits of various automatic weapons. I was well pleased to see that Mr. Mullins treats the machine pistol as a legitimate (but poorly understood) weapon. I do take exception to his fervent dislike for folding stocks. I don't view the SMG as a main-line general issue firearm, but rather as a piece for issue to those less likely to be in the line of fire. For such a person, ease

of carry is critical if you want the weapon to be available when needed. Also, the weapon's high firepower is of particular use when such persons need it. I fully agree that a solid stock makes it much easier to control any weapon's fire. But if the cook will carry a folding-stock PPs-43, then it's better than the full-stocked PPsh-41 in the truck. I picked up my copy at Knob Creek and stayed up late Saturday night reading it. I now consider it one of my favorite reference books. Thanks!
0 von 0 Kunden fanden die folgende Rezension hilfreich. Well, at least he seems to have shot 'em
Von Ein KundeThe author seems to have the guns he writes about to really have shot. But that's the end of praise. Always his preferences, instead of told once, repeated over and over again, is boring. Pics mostly of himself, partially ridiculously looking. Same for his "aggressive stance" theories. I think he is a 100% A... I won't buy another book from him!

KurzbeschreibungThe third in T.J. Mullin's war weapons series is on semiautomatic machine guns, machine pistols and shotguns, perhaps the least understood of individual weapons. He tests more than 50 battle-scarred weapons from North America, Europe, Asia and the Middle East and tells you which ones you can count on (and which ones you can't) and why.
