KurzbeschreibungFREE Internet means exactly thatFREE INTERNET!UPDATE July 28, 2010 - This book describes in detail, how for a few dollars, you can build high-gain WI-FI antennas from parts you can find at your local hardware store. These antennas will allow you to reach out and pickup those FREE Internet connections that are scattered across almost every community in the world.Its fun! Its easy! And it could save you from \$25 to \$60 a month in Internet service charges. Over a years time, youre looking at \$300 to \$700+ in savings.Most of these antennas can be built for less than \$15 in parts. The most powerful one, the WI-FI CANnon takes about an hour to build and costs a whopping \$11. If you dont already have a USB adapter, add another \$15 or so. Thats still less than youd probably pay for the average broadband connection- EVERY month!To track down these FREE wireless connections, I've listed several websites where you can log in and find the hotspots in your area. These 'hotspots' include WI-FI provided by local governments, libraries, Universities, park departments, hotels, motels, restaurants, RV parks, visitor centers, etc., and the list goes on and on. The websites are updated daily with new hotspots appearing all the time.Are you having trouble getting an Internet signal to every room in your house or outside on the patio? Ive included a chapter that shows you how to build a simple, cheap, (\$1) WI-FI reflector that will solve these problems. You can build it in about ten minutes using cardboard and aluminum foil!Also included is a chapter on how to stop hackers, neighbors or anyone else from logging onto your wireless connection.If youre tired of paying for InternetFREE Internet could help you to get off the Internets money-go-round and start saving money instead of spending it! FREE Internet is also available on in paperback. Updated 11/18/2009
